RAVINDRAN CANARYPALLY

Head of Data and Analytics
Bengaluru, Karnataka | canary.mail.7731@example.com | +91 98765 43210
PAN: ABCDE1234F | Aadhaar: 2345 6789 0123

SUMMARY

Analytics leader with twenty years in data, reporting and decision support across retail, logistics and lending. I build small teams, simple dashboards and careful processes. This is the long version of my resume, with full detail for each role, my projects, talks, training and community work.

EXPERIENCE

Head of Data and Analytics
Canaryworks Pvt Ltd, Bengaluru
Jan 2022 - Present

- Built the weekly management report in Python, which cut the effort by half.
- Designed a pricing study using SQL and PostgreSQL, saving about two days each month.
- Automated the budget model for the year using Tableau and Jira, so managers could decide faster.
- Improved the data quality rules in Power BI, and the review took one hour instead of a day.
- Reviewed an audit of delivery delays using PostgreSQL and Docker, and it was adopted by two other teams.
- Planned the forecasting process using Docker and Python, and the team used it every week.
- Led the sales target tracker in Git, and leadership asked for it every quarter.
- Documented a supplier scorecard using Jira and Git, and errors fell sharply.
- Migrated a training programme for new analysts using Python and SQL, which cut the effort by half.
- Tested the month-end checks in SQL, saving about two days each month.
- Simplified the monthly MIS pack using Tableau and Jira, so managers could decide faster.
- Reported on the customer churn model using Power BI and Tableau, and the review took one hour instead of a day.
- Built a routing cost model in PostgreSQL, and it was adopted by two other teams.
- Designed a stock and sales dashboard using Docker and Python, and the team used it every week.
- Automated the return and refund analysis using Git and Power BI, and leadership asked for it every quarter.
- Improved the weekly management report in Jira, and errors fell sharply.
- Reviewed a pricing study using Python and SQL, which cut the effort by half.
- Planned the budget model for the year using SQL and PostgreSQL, saving about two days each month.
- Led the data quality rules in Tableau, so managers could decide faster.
- Documented an audit of delivery delays using Power BI and Tableau, and the review took one hour instead of a day.
- Migrated the forecasting process using PostgreSQL and Docker, and it was adopted by two other teams.
- Tested the sales target tracker in Docker, and the team used it every week.
- Simplified a supplier scorecard using Git and Power BI, and leadership asked for it every quarter.
- Reported on a training programme for new analysts using Jira and Git, and errors fell sharply.
- Built the month-end checks in Python, which cut the effort by half.
- Designed the monthly MIS pack using SQL and PostgreSQL, saving about two days each month.
- Automated the customer churn model using Tableau and Jira, so managers could decide faster.
- Improved a routing cost model in Power BI, and the review took one hour instead of a day.
- Reviewed a stock and sales dashboard using PostgreSQL and Docker, and it was adopted by two other teams.
- Planned the return and refund analysis using Docker and Python, and the team used it every week.
- Led the weekly management report in Git, and leadership asked for it every quarter.

- Documented a pricing study using Jira and Git, and errors fell sharply.
- Migrated the budget model for the year using Python and SQL, which cut the effort by half.
- Tested the data quality rules in SQL, saving about two days each month.
- Tools: Python, SQL, Tableau, Power BI, PostgreSQL, Docker, Git, Jira.

Analytics Manager
Brightloom Analytics, Pune
Jun 2018 - Dec 2021

- Planned the month-end checks in SQL, and the team used it every week.
- Led the monthly MIS pack using Tableau and Microsoft Excel, and leadership asked for it every quarter.
- Documented the customer churn model using MySQL and Python, and errors fell sharply.
- Migrated a routing cost model in Hadoop, which cut the effort by half.
- Tested a stock and sales dashboard using Microsoft Excel and pandas, saving about two days each month.
- Simplified the return and refund analysis using pandas and SQL, so managers could decide faster.
- Reported on the weekly management report in scikit-learn, and the review took one hour instead of a day.
- Built a pricing study using Python and scikit-learn, and it was adopted by two other teams.
- Designed the budget model for the year using SQL and Tableau, and the team used it every week.
- Automated the data quality rules in Tableau, and leadership asked for it every quarter.
- Improved an audit of delivery delays using MySQL and Python, and errors fell sharply.
- Reviewed the forecasting process using Hadoop and MySQL, which cut the effort by half.
- Planned the sales target tracker in Microsoft Excel, saving about two days each month.
- Led a supplier scorecard using pandas and SQL, so managers could decide faster.
- Documented a training programme for new analysts using scikit-learn and Hadoop, and the review took one hour instead of a day.
- Migrated the month-end checks in Python, and it was adopted by two other teams.
- Tested the monthly MIS pack using SQL and Tableau, and the team used it every week.
- Simplified the customer churn model using Tableau and Microsoft Excel, and leadership asked for it every quarter.
- Reported on a routing cost model in MySQL, and errors fell sharply.
- Built a stock and sales dashboard using Hadoop and MySQL, which cut the effort by half.
- Designed the return and refund analysis using Microsoft Excel and pandas, saving about two days each month.
- Automated the weekly management report in pandas, so managers could decide faster.
- Improved a pricing study using scikit-learn and Hadoop, and the review took one hour instead of a day.
- Reviewed the budget model for the year using Python and scikit-learn, and it was adopted by two other teams.
- Planned the data quality rules in SQL, and the team used it every week.
- Led an audit of delivery delays using Tableau and Microsoft Excel, and leadership asked for it every quarter.
- Documented the forecasting process using MySQL and Python, and errors fell sharply.
- Migrated the sales target tracker in Hadoop, which cut the effort by half.
- Tested a supplier scorecard using Microsoft Excel and pandas, saving about two days each month.
- Simplified a training programme for new analysts using pandas and SQL, so managers could decide faster.
- Reported on the month-end checks in scikit-learn, and the review took one hour instead of a day.
- Built the monthly MIS pack using Python and scikit-learn, and it was adopted by two other teams.
- Tools: Python, SQL, Tableau, MySQL, Hadoop, Microsoft Excel, pandas, scikit-learn.

Senior Business Analyst
Kestrel Logistics, Mumbai
Jul 2014 - May 2018

- Simplified the data quality rules in SAS, so managers could decide faster.

- Reported on an audit of delivery delays using Minitab and Linux, and the review took one hour instead of a day.
- Built the forecasting process using Tableau and SAS, and it was adopted by two other teams.
- Designed the sales target tracker in Microsoft Project, and the team used it every week.
- Automated a supplier scorecard using Linux and Microsoft Excel, and leadership asked for it every quarter.
- Improved a training programme for new analysts using SQL and Tableau, and errors fell sharply.
- Reviewed the month-end checks in Microsoft Excel, which cut the effort by half.
- Planned the monthly MIS pack using SAS and Minitab, saving about two days each month.
- Led the customer churn model using Minitab and Linux, so managers could decide faster.
- Documented a routing cost model in Tableau, and the review took one hour instead of a day.
- Migrated a stock and sales dashboard using Microsoft Project and Microsoft Project, and it was adopted by two other teams.
- Tested the return and refund analysis using Linux and Microsoft Excel, and the team used it every week.
- Simplified the weekly management report in SQL, and leadership asked for it every quarter.
- Reported on a pricing study using Microsoft Excel and SQL, and errors fell sharply.
- Built the budget model for the year using SAS and Minitab, which cut the effort by half.
- Designed the data quality rules in Minitab, saving about two days each month.
- Automated an audit of delivery delays using Tableau and SAS, so managers could decide faster.
- Improved the forecasting process using Microsoft Project and Microsoft Project, and the review took one hour instead of a day.
- Reviewed the sales target tracker in Linux, and it was adopted by two other teams.
- Planned a supplier scorecard using SQL and Tableau, and the team used it every week.
- Led a training programme for new analysts using Microsoft Excel and SQL, and leadership asked for it every quarter.
- Documented the month-end checks in SAS, and errors fell sharply.
- Migrated the monthly MIS pack using Minitab and Linux, which cut the effort by half.
- Tested the customer churn model using Tableau and SAS, saving about two days each month.
- Simplified a routing cost model in Microsoft Project, so managers could decide faster.
- Reported on a stock and sales dashboard using Linux and Microsoft Excel, and the review took one hour instead of a day.
- Built the return and refund analysis using SQL and Tableau, and it was adopted by two other teams.
- Designed the weekly management report in Microsoft Excel, and the team used it every week.
- Automated a pricing study using SAS and Minitab, and leadership asked for it every quarter.
- Improved the budget model for the year using Minitab and Linux, and errors fell sharply.
- Tools: SQL, Microsoft Excel, SAS, Minitab, Tableau, Microsoft Project, Linux.

Business Analyst
Hilltop Retail, Hyderabad
2011-2014

- Improved a routing cost model in SAS, and errors fell sharply.
- Reviewed a stock and sales dashboard using Oracle Database and Microsoft Access, which cut the effort by half.
- Planned the return and refund analysis using SQL and SQL, saving about two days each month.
- Led the weekly management report in Microsoft Excel, so managers could decide faster.
- Documented a pricing study using Microsoft Access and Microsoft Excel, and the review took one hour instead of a day.
- Migrated the budget model for the year using SAS and Oracle Database, and it was adopted by two other teams.
- Tested the data quality rules in Oracle Database, and the team used it every week.
- Simplified an audit of delivery delays using SQL and SQL, and leadership asked for it every quarter.
- Reported on the forecasting process using Microsoft Excel and SAS, and errors fell sharply.
- Built the sales target tracker in Microsoft Access, which cut the effort by half.

- Designed a supplier scorecard using SAS and Oracle Database, saving about two days each month.
- Automated a training programme for new analysts using Oracle Database and Microsoft Access, so managers could decide faster.
- Improved the month-end checks in SQL, and the review took one hour instead of a day.
- Reviewed the monthly MIS pack using Microsoft Excel and SAS, and it was adopted by two other teams.
- Planned the customer churn model using Microsoft Access and Microsoft Excel, and the team used it every week.
- Led a routing cost model in SAS, and leadership asked for it every quarter.
- Documented a stock and sales dashboard using Oracle Database and Microsoft Access, and errors fell sharply.
- Migrated the return and refund analysis using SQL and SQL, which cut the effort by half.
- Tested the weekly management report in Microsoft Excel, saving about two days each month.
- Simplified a pricing study using Microsoft Access and Microsoft Excel, so managers could decide faster.
- Reported on the budget model for the year using SAS and Oracle Database, and the review took one hour instead of a day.
- Built the data quality rules in Oracle Database, and it was adopted by two other teams.
- Designed an audit of delivery delays using SQL and SQL, and the team used it every week.
- Automated the forecasting process using Microsoft Excel and SAS, and leadership asked for it every quarter.
- Improved the sales target tracker in Microsoft Access, and errors fell sharply.
- Reviewed a supplier scorecard using SAS and Oracle Database, which cut the effort by half.
- Planned a training programme for new analysts using Oracle Database and Microsoft Access, saving about two days each month.
- Led the month-end checks in SQL, so managers could decide faster.
- Tools: SQL, Microsoft Excel, Microsoft Access, SAS, Oracle Database.

MIS Executive
Eastwind Traders, Chennai
2008 - 2011

- Migrated the sales target tracker in Microsoft Access, and it was adopted by two other teams.
- Tested a supplier scorecard using SQL and SQL, and the team used it every week.
- Simplified a training programme for new analysts using Microsoft Excel and SQL, and leadership asked for it every quarter.
- Reported on the month-end checks in Microsoft Access, and errors fell sharply.
- Built the monthly MIS pack using SQL and SQL, which cut the effort by half.
- Designed the customer churn model using Microsoft Excel and SQL, saving about two days each month.
- Automated a routing cost model in Microsoft Access, so managers could decide faster.
- Improved a stock and sales dashboard using SQL and SQL, and the review took one hour instead of a day.
- Reviewed the return and refund analysis using Microsoft Excel and SQL, and it was adopted by two other teams.
- Planned the weekly management report in Microsoft Access, and the team used it every week.
- Led a pricing study using SQL and SQL, and leadership asked for it every quarter.
- Documented the budget model for the year using Microsoft Excel and SQL, and errors fell sharply.
- Migrated the data quality rules in Microsoft Access, which cut the effort by half.
- Tested an audit of delivery delays using SQL and SQL, saving about two days each month.
- Simplified the forecasting process using Microsoft Excel and SQL, so managers could decide faster.
- Reported on the sales target tracker in Microsoft Access, and the review took one hour instead of a day.
- Built a supplier scorecard using SQL and SQL, and it was adopted by two other teams.
- Designed a training programme for new analysts using Microsoft Excel and SQL, and the team used it every week.
- Automated the month-end checks in Microsoft Access, and leadership asked for it every quarter.

- Improved the monthly MIS pack using SQL and SQL, and errors fell sharply.
- Reviewed the customer churn model using Microsoft Excel and SQL, which cut the effort by half.
- Planned a routing cost model in Microsoft Access, saving about two days each month.

EDUCATION

MBA, Analytics, Canary Institute of Technology, Chennai
2002 - 2004
B.Sc., Mathematics, Madurai Kamaraj University
1999 - 2002

PROJECTS

Project 1: a supplier scorecard

- Planned the scope with the business owner, built the first version in a week and iterated for 3 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 2: the return and refund analysis

- Planned the scope with the business owner, built the first version in a week and iterated for 4 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 3: the sales target tracker

- Planned the scope with the business owner, built the first version in a week and iterated for 5 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 4: a stock and sales dashboard

- Planned the scope with the business owner, built the first version in a week and iterated for 6 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 5: the forecasting process

- Planned the scope with the business owner, built the first version in a week and iterated for 7 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 6: a routing cost model

- Planned the scope with the business owner, built the first version in a week and iterated for 8 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 7: an audit of delivery delays

- Planned the scope with the business owner, built the first version in a week and iterated for 9 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 8: the customer churn model

- Planned the scope with the business owner, built the first version in a week and iterated for 10 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 9: the data quality rules

- Planned the scope with the business owner, built the first version in a week and iterated for 11 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 10: the monthly MIS pack

- Planned the scope with the business owner, built the first version in a week and iterated for 12 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.

- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 11: the budget model for the year

- Planned the scope with the business owner, built the first version in a week and iterated for 13 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 12: the month-end checks

- Planned the scope with the business owner, built the first version in a week and iterated for 14 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 13: a pricing study

- Planned the scope with the business owner, built the first version in a week and iterated for 15 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 14: a training programme for new analysts

- Planned the scope with the business owner, built the first version in a week and iterated for 16 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 15: the weekly management report

- Planned the scope with the business owner, built the first version in a week and iterated for 17 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 16: a supplier scorecard

- Planned the scope with the business owner, built the first version in a week and iterated for 18 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 17: the return and refund analysis

- Planned the scope with the business owner, built the first version in a week and iterated for 19 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 18: the sales target tracker

- Planned the scope with the business owner, built the first version in a week and iterated for 20 weeks.

- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 19: a stock and sales dashboard

- Planned the scope with the business owner, built the first version in a week and iterated for 21 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 20: the forecasting process

- Planned the scope with the business owner, built the first version in a week and iterated for 22 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 21: a routing cost model

- Planned the scope with the business owner, built the first version in a week and iterated for 23 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

Project 22: an audit of delivery delays

- Planned the scope with the business owner, built the first version in a week and iterated for 24 weeks.
- Wrote a one-page guide so that anyone on the team could run it. Presented the results to the leadership team.
- Lessons: start small, ask what decision the number will change, and check the data with the people who made it.

TALKS AND TRAINING

- 2005 talk or course 1: practical reporting for non-technical teams; attended by 23 people.
- 2006 talk or course 2: practical reporting for non-technical teams; attended by 26 people.
- 2007 talk or course 3: practical reporting for non-technical teams; attended by 29 people.
- 2008 talk or course 4: practical reporting for non-technical teams; attended by 32 people.
- 2009 talk or course 5: practical reporting for non-technical teams; attended by 35 people.
- 2010 talk or course 6: practical reporting for non-technical teams; attended by 38 people.
- 2011 talk or course 7: practical reporting for non-technical teams; attended by 41 people.
